Planned Site Use: Commercial/Industrial/Retail		Deed Restrictions: Yes; Effective Date: March 1, 1999; prohibits groundwater extraction with the exception for groundwater treatment and constructon dewatering.						
Engineering Controls: Monitored natural attenuation.		Target Cleanup Levels: The Remedial Goal for Trichloroethelyne (TCE), the main contaminant, is 2.7 ug/L and is based on the Maximum Contaminant Level (MCL) in affect at the time of the Remedial Action Plan. The MCL for TCE is now 5 ug/L and was established as the new target cleanup level during the 2010 Five Year Review.						
Ongoing Monitoring: Groundwater--Annual groundwater elevation measurement and water quality monitoring conducted in the third quarter each year.		Current Contamination Levels: Since the shut off of the groundwater extraction system in September 2008, Trichloroethelyne (TCE) concentrations in the groundwater plume have declined. Highest concentrations of TCE are found in MW-19; however, MW-19 does exhibit decreasing levels of TCE (67 ug/L 3/2010; 55 ug/L in 7/2010; and 44 in 9/2011). TCE has also declined in monitoring well MW-23 at the center of the plume (50 ug/L in 3/2010; 55 ug/L in 7/2010; and 40 ug/L in 9/2011; and 37 ug/L in 2012). Monitoring well MW-24, at the leading edge of the plume, has remained relatively stable levels of TCE (15 Ug/L 3/2010; and 16 ug/L in 7/2010; and 12 in 9/2011; and 16 ug/L in 2012). Downgradient and cross gradient wells (MW-9, MW-18 and MW-22) continue to be non-detect for all contaminants of concern. Groundwater monitoring was reduced to once every two years. The next groundwater monitoring report is due Dec. 2014. (07/2013)
