These interactive *kmz* maps shows urban heat islands in California as measured by the Urban Heat Island Index. The urban heat islands are color coded according to their intensity, with green representing the smallest effect and red to white representing the greatest intensity. If you click on a census tract, a popup box appears. The last row of the box, labeled "DegHourDay" indicates the Urban Heat Island Index in Celcius degree-hours per day.

The *jpg* map legend shows the range of intensity measured in Celcius degree-hours per day. For more information, including instructions on how to interact with the maps, please visit [Urban Heat Island Home](#). If you need assistance, please contact

Office of the Secretary
California Environmental Protection Agency
