**Subject:** Need incentives to shield electric vehicles from electromagnetic fields  
I want to convince my relatives to buy electric cars,but

They are worried about being exposed to electromagnetic waves. I know about the toxic metals,; hexavalent chromium, radium, tritium radionuclide, nickel, Mercury, lead, hydrogen fluoride,excessive barium& strontium brought out by oil industry chemicals & how they sometimes contaminate our decreasing supply of water that decreased due to global warming and nosebleeds from hydrogen sulfide and other long term impacts. Please give incentives to shield drivers from EMR. Thanks, Laura
