Subject: Question on Vehicle Emissions and Fossil Fuel Studies

How complete is the current scope of these studies? Carbon neutrality and reducing the use of fossil fuels do not necessarily mean eliminating fossil fuels. In the Secretaries opening comments he mentioned gas stations/brownfields and asphalt in conjunction with elimination of fossil fuels... Is it predetermined that carbon negative liquid or gaseous fuels (like RNG and Hydrogen) retailed at existing stations will not be seriously considered for the future?

Will written comments be accepted after this workshop to help inform the Scope of this contract? If so, when are they due?
