California On-road Transportation Fuels

- 14.54 billion gallons of gasoline consumed in 2013
- Base gasoline demand down 13.4 percent between 2003 and 2013
  - Ethanol use increasing due to Renewable Fuel Standard
  - Ethanol use up to 1.46 billion gallons during 2013
  - 148 percent increase since 2003
  - Ethanol accounted for 10 percent of total gasoline gallon during 2013
California On-road Transportation Fuels

- 3.48 billion gallons diesel consumed during 2013
- Base diesel fuel demand unchanged between 2003 and 2013
  - Biodiesel use increasing due to Renewable Fuel Standard and the Low Carbon Fuel Standard (LCFS)
    - 49 MM gallons during 2013
  - Renewable diesel fuel use up to 136 MM gallons during 2013 due to LCFS
  - Combined renewable component accounted for 5.3 percent of total diesel gallon

![California Diesel, Biodiesel & Renewable Diesel Demand 2003 - 2013](chart.png)
Transportation Fuel
Infrastructure Overview
Fuel Infrastructure – Key Elements

• The California transportation fuel “infrastructure” consists of several interconnected assets operated by a combination of refiner and third-party companies
  • Refineries
  • Pipelines
  • Marine terminals
  • Storage tanks
  • Rail

• Crude oil and petroleum product infrastructure assets are separate and distinct from one another – not interchangeable

• Unlike with the electricity distribution system, Northern California is not directly connected to Southern California
Western States More Isolated than Rest of U.S.

West Coast petroleum product supply map

Product Supply – PADD 5 (West Coast)
- = Bulk Terminal
○ = Refining center
● = Refinery
— = Product Pipeline
■ = Product Flows
= = Urban Areas

Source: U.S. Energy Information Administration.
Key Elements - Refineries

- 3 primary refinery locations
- 12 refineries produce transportation fuels that meet California standards
- 8 smaller refineries produce asphalt and other petroleum products
- California refineries provide majority of transportation fuel to neighboring states
- Process over 1.6 million barrels per day of crude oil
Key Elements - Refineries

- Refineries are a primary hub of logistical activity
  - Raw materials imported & finished products shipped
- Crude oil receipts during 2014 received by
  - Marine vessels (foreign) - 787.1 TBD
  - Marine vessels (Alaska) – 190.5 TBD
  - California source via pipelines – 664.8 TBD
  - Rail/truck – 15.7 TBD
- Process units operate continuously at or near maximum capacity, except during periods of planned maintenance or unplanned outages
Supply in Northern California

- The minority of transportation fuels used in California are produced in Northern California

- California share
  - CARB Gasoline 39.9 %
  - CARB Diesel 48.7 %
  - Jet Fuel 34.4 %
  - Export Fuel 45.2 %

- Crude oil processing
  - 754.8 TBD

- Crude marine imports
  - Foreign – 415.4 TBD
  - Alaska – 70.9 TBD
  - North Dakota – 3.4 TBD

- Crude rail imports
  - Domestic – 3.5 TBD

- Pipeline receipts
  - San Joaquin Valley – 261.6 TBD

Source: California Energy Commission - Weekly Refinery Reports
Key Elements – Refineries (cont)

- Output from the refineries is usually placed in intermediate tanks prior to blending the finished products.
- The majority of gasoline, diesel and jet fuel is shipped from the refinery by pipeline to over 60 distribution terminals.
- Tanker trucks then transport fuel to retail & non-retail stations.
- Several truck trips during 2013:
  - Gasoline – 39.84 MM gal/day
    - 4,980 tanker deliveries/day
  - Diesel fuel – 9.53 MM gal/day
    - 1,191 tanker deliveries/day
## Bay Area Gas Stations – Average Sales

Key Elements – Pipelines

• Pipelines are used throughout the distribution infrastructure to interconnect key elements

• Intra-state pipelines are used to convey petroleum products within California’s borders

• Interstate pipelines are used to export transportation fuels to Arizona and Nevada
  • NV – Over 90% of supply
  • AZ – Over 50% of supply

• As is the case with refineries, pipeline systems normally operate on a continuous basis

• Pipelines can only operate if transportation fuels are available to push liquid through the system
The pipeline infrastructure in California is controlled by a combination of common carrier and private companies.

Kinder Morgan is the sole common carrier of petroleum product pipelines in the State and transports the majority of fuels through its system every day.

Other companies, such as Chevron, ExxonMobil, Shell, and Tesoro operate proprietary systems or segments that handle the balance of transportation fuels.
Bay Area – Kinder Morgan Lines

- The sole source of fuels for Bay Area airports
- Trans-bay crossing to Brisbane and SFO
- Distribution to Brisbane and San Jose terminals augments supply from truck racks linked to Bay Area refineries
- 75 to 85 percent of gasoline and diesel fuel is distributed through pipelines from refineries to distribution terminals
Bay Area – Kinder Morgan North Lines

- The Chico terminal is the northernmost extent of petroleum product pipeline system in California
- Pipeline continues to Reno (Sparks), Nevada
- Deliveries to Roseville for railroad use
- Separate pipeline delivers military jet fuel to Travis AFB (not shown on map) from Concord pump station
- Separate spur line to Beale AFB
- Sacramento Airport now receives commercial jet fuel via pipeline connection
The Fresno terminal is the southernmost extent of the petroleum product pipeline system originating from the Concord pump station.

Lemoore naval air station receives military jet fuel on a separate extension originating from the Fresno terminal (line segment not shown on this map).

Fresno terminal can also receive fuel from pipeline segment originating from the ALON USA refinery in Bakersfield that is currently idle.
Key Elements – Marine Facilities

- Marine facilities are located in sheltered harbors with adequate draught to accommodate typical sizes of petroleum product tankers and crude oil vessels.
- Wharves usually have adjacent storage tanks that are used to temporarily hold petroleum products prior to transfer to a subsequent location.
- Most refiners operate a proprietary dock.
- Third party storage provides access to majors and independents.
  - Kinder Morgan
  - Pacific Atlantic
  - NuStar
  - Petro-Diamond
Rail Logistics - Ethanol

• State receives ethanol via rail unit trains at two locations
  • Lomita Rail Terminal in Carson
  • West Colton Rail Terminal
• Ethanol is then trucked to gasoline distribution terminals
  • – 4.0 MM gal/day during 2013 or 500 tanker truck deliveries/day
Rail Logistics – Other Uses

- Refiners use rail cars to routinely ship propane and seasonally send out and receive butane
- Rail cars are also used to deliver refinery feedstock such as gas oils and sulfuric acid for alkylation units
- More recently, California refiners have started using rail cars to import crude oil from Canada and domestic sources outside the state due to changing trends of increasing oil production and discounted prices
Ethanol accounted for 71.2 percent of volume during 2013, crude oil 17.0 percent.
California Crude Oil Production
Source By Geographic Region

Production has declined by 48.9 percent between 1985 and 2013.
California Crude Oil Production
Onshore - Producing Wells & Output

48,778 Producing Wells
16.6 percent increase Jan. 2003

15.66 Barrels per Day per Well

10.39 Barrels per Day per Well
33.6 percent decline since Jan. 2003

41,823 Producing Wells

Sources: CEC analysis of CA Division of Oil, Gas & Geothermal Resources data

California Energy Commission
Northern California refineries processed 754.8 thousand barrels per day of crude oil during 2014
  - 261.6 TBD pipeline shipments
  - 35 percent of crude oil received

Northern California refineries processed 45.5 percent of total crude oil

Increased crude-by-rail likely to back out marine receipts of similar quality

Rail capability increases flexibility to enhance supply options & reduces risk of crude oil receipt curtailment
Declining CA & Alaska sources replaced by additional foreign imports.
Foreign Sources of Crude Oil Imports to California 2014

- Saudi Arabia: 35.5%
- Iraq: 21.7%
- Ecuador: 17.1%
- Colombia: 8.7%
- Canada: 4.8%
- Angola: 4.5%
- Brazil: 2.4%
- Mexico: 1.6%
- Russia: 1.3%
- Peru: 0.9%
- Venezuela: 0.9%
- Others: 0.6%

Change in Crude Oil Production
January 2010 vs. December 2014

U.S. crude oil production has increased from 5.403 million barrels per day in January 2010 to 9.226 million barrels per day during December 2014.

Source: Energy Information Administration (EIA)

3 U.S. fields each exceed 1 MM barrels per day
Combined 4.960 MM BPD

Ghawar (Saudi Arabia) – Peak 5.0 MM BPD in 2005, now 4.5 MM BPD
Samotlor (Russia) – Peak 3.0 MM BPD in 1980, now 0.84 MM BPD
Burgan (Kuwait) – Peak 2.4 MM BPD in 1972, now 1.7 MM BPD
Cantarell (Mexico) – Peak 2.1 MM BPD in 2003, now 0.41 MM BPD
Rumaila (Iraq) – Peak 1.6 MM BPD in 1980, now 1.3 MM BPD
Safaniya (Saudi Arabia) – Peak 1.5 MM BPD in 1990s, now 1.2 MM BPD
Kirkuk (Iraq) – Peak 1.2 MM BPD in 1980, now 0.23 MM BPD
Daqing (China) – Peak 1.1 MM BPD in 1997, now 0.75 MM BPD

Global Crude Oil Production 2013 vs. 2008

Thousands of Barrels Per Day

Sources: 2014 BP Statistical Review and Energy Commission Analysis
No crude oil pipelines into California...one project being examined.
Crude Oil – Export Restrictions

- Domestically-produced crude oil exports to foreign destinations are allowed under specific "license exceptions" identified under federal statute. Those primary exceptions include:
  - Alaska crude oil shipped on the Trans-Alaska Pipeline System (TAPS) and exported via a Jones Act vessel directly from Valdez Harbor
  - California heavy crude oil production with API gravity of 20.0 degrees or lower, limit of no more than 25,000 barrels per day
    - First export license for California heavy crude oil was granted on December 9, 1991 – no heavy crude oil exports for several years
  - Exports of domestic crude oil to Canada for processing by Canadian refineries
  - Exports in connection with refining or exchange of Strategic Petroleum Reserve crude oil
  - Companies can also apply to the federal Bureau of Industry and Security (BIS) for an export license that basically requires Presidential approval

Recent export licenses for “processed” condensate approved.
Each rail car assumed to carry approximately 714 barrels of crude oil.

*Other States include Illinois, Louisiana, Missouri, Nebraska, Arkansas.*
One location currently receiving CBR deliveries
- Kinder Morgan – Richmond Rail Facility
- Facility is permitted to receive an average maximum of 16,000 barrels per day of crude oil via rail tank car
- Crude oil transferred to trucks
- Kinder Morgan facility can receive crude oil unit trains
- SAV Patriot in McClellan had permit rescinded and operations ceased in early November 2014
CBR Routing Information - California

- Energy Commission does not track routes of CBR deliveries – only source states/provinces, destinations within California, and volumes
- Counties transited by trains carrying more than 1 MM gallons of Bakken crude oil are reported by Class 1 railroads to OES
- Crude oil from Canada, North Dakota and Wyoming will likely traverse the state from north to south
- Crude oil from Colorado, New Mexico and Texas will likely traverse the state from east to west
Why have CBR imports been declining?
CBR Imports Vary by Size of Oil Discount

Sources: Plains All American crude oil price bulletins & CEC crude-by-rail data from Class 1 railroads.

3/26/2015

California Energy Commission
California CBR Imports Expected to Grow

- Three CBR projects seeking permits
  - 2 Northern California
  - 1 in San Luis Obispo County
- One CBR project received permits
  - Alon USA - Bakersfield
- One CBR project operational
  - Plains All American – near Bakersfield
- CBR imports during 2015
  - Could approach 4 percent if Plains All American facility operates at capacity next year
- Could grow up to 22 percent by 2016, assuming:
  - Permits issued, customers signed up, financing approved, construction completed & facilities operated at capacity

Sources: PHRA data, Energy Commission Analysis

3/26/2015
Valero – Benicia Crude Oil By Rail Project – Permit Review

- Benicia refinery
- Up to 70,000 BPD
- Construction will take 6 months
- Could be operational by 2015
- Draft EIR released June 17, 2014
- Comments closed Sept. 15
- Lead agency – City of Benicia

http://www.ci.benicia.ca.us/index.asp?Type=B_BASIC&SEC=FD9A332-542E-44C1-BBD0-A94C288675FD
WesPac Energy Project – Pittsburg – Permit Review

- Rail receipt average capability of 50,000 barrels per day (BPD)
- Includes marine terminal for receipt and loading – average of 192,000 BPD
- Combined average receipt capability of 242,000 BPD
- Connection to KLM pipeline – access to Valero, Shell, Tesoro & Phillips 66 refineries
- Connection to idle San Pablo Bay Pipeline – access to Shell, Tesoro & Phillips 66 refineries
- Construction of the first phase for the rail facility and associated storage tanks could be completed within 12 to 15 months of receiving all permits
- Could be operational by 2016
- A recirculated draft environmental impact report (RDEIR) will be developed and a new comment period set for those applicable sections
- There is currently no scheduled release date for the RDEIR
- Lead agency – City of Pittsburg

Crude-by-Rail Projects – Bakersfield

Alon Crude Flexibility Project - Approved
- Alon – Bakersfield Refinery
- 2 unit trains per day
- 150,000 BPD offloading capacity
- Will be able to receive heavy crude oil
- Oil tankage connected to main crude oil trunk lines – transfer to other refineries
- Kern County Board of Supervisors approved permits for the project on September 9, 2014
- Construction will take 9 months, could be complete by 2015 assuming customers sign long-term agreements and financing is approved

Plains All American – Bakersfield Crude Terminal – Operational
- Up to 65,000 BPD
- Connection to additional crude oil line via new six-mile pipeline
- Initial delivery during November 2014
